

VOSSForm 100 Compact – The space-saving alternative

Ready for the construction site.

The forming machine VOSSForm 100 Compact is the alternative to the VOSSForm 100 when it comes to compact external dimensions. This table unit has been designed especially for the construction site or a small volume production - allowing it to offer the same advantages as the standing unit. The VOSSForm^{SQR} tube contour in steel or stainless steel is identical – the tools can be used with both the table and standing unit. The table unit also comes with an integrated stop plate designed to prevent insertion errors. The intuitive operating concept is user friendly and quick to learn. The advantages of the Compact variant are especially apparent when transporting it: a special holder for forklifts is integrated on the bottom, sturdy crane lugs having been mounted on the top for this.

- Compact table unit variant of type 100
- Same forming process and operating comfort
- For use on the construction site or in small volume production
- Optionally available with foot switch

Systems	VOSSForm ^{SQR} and VOSSForm ^{SQRVA}	tube OD 6 mm – 42 mm
Applications	Transportable table unit, for the construction site or small volume production	
Technical details	Minor changes to cycle times compared to Type VOSSForm 100, omission of the integrated tool magazine and cooling system
